

Nasdaq Futures Diversification Platform - Short Funding

Memo

Purpose: request funding for a CTA-registration-first 12-month development and validation runway.

This memo is not legal, tax, or investment advice.

Executive Summary

The proposed project is a private build-and-test effort for a futures-based diversification platform. The first deployable tier is Nasdaq Intraday Mini, using MNQ so research, live data, and operational validation can be done with lower capital intensity. Nasdaq Intraday is the future NQ version once the MNQ runtime proves stable.

The requested initial budget is about \$145,000. That covers development time, data, cloud/runtime costs, broker/API/exchange allowances, CTA registration/disclosure work, audit/accounting reserve, contingency, and \$50,000 of segregated MNQ research/test capital.

CTA Registration-First Adjustment

The package now assumes the regulatory path is handled before any compensated commodity-interest advisory activity or managed client trading begins. The budget includes NFA/Series 3/registration administration and a larger CTA disclosure/legal/compliance/audit reserve. Canadian CTC/cross-border registration remains a separate counsel-confirmed expansion item, not a base-runway promise.

Founder Partner Exchange

The early family/friends risk is real: they are supporting an unproven live-test platform with no audited managed-account track record. In exchange, the intended alignment is that successful early supporters become Founder Partner Accounts if the platform later transitions into a compliant CTA-style offering.

| Founder Benefit | Draft Principle |

| Early access | They can participate from day zero in a systematic futures program if the live validation supports launch. |

| Better economics | Target founder terms are 0% management / 10% performance fee instead of a future standard 1/20 model. |

| Capacity priority | If the strategy later becomes capacity-constrained, early accounts should receive priority access before new outside allocations. |

| Formal protection | Any founder terms should be documented in counsel-reviewed side letters or equivalent account documents. |

These are proposed alignment principles, not a guarantee of returns, fee treatment, capacity, or future offering availability. Counsel must decide the correct documentation before any investor-facing commitment is made.

Why It May Diversify QQQ Exposure

The selected futures strategies are intraday and can trade both directions. They are not designed as passive Nasdaq exposure. QQQ benchmark rows follow the same fair-comparison convention used in the research tracker: the passive benchmark invests the full tier minimum over the same clipped strategy window. In the current backtests, daily return correlations to QQQ are slightly negative, and the preferred systems remained positive during the available QQQ down-year windows.

Tier	System	Market	Minimum	Window	Total Net	Advertised Avg/Yr	Advertised Return/Yr
Corr to QQQ							
Nasdaq Intraday	Prior-Proposed Gated Intraday System	NQ	\$250,000	2010-11-29 to 2026-03-06			
1,713,278	57,990	23.2%	-0.06				
Nasdaq Intraday Mini	Prior-Proposed Gated Intraday System	MNQ	\$50,000	2021-03-04 to			
2026-03-06	113,548	10,048	20.1%	-0.09			

Conservative Return Standard

For conversations with prospective investors, the headline number should not use the full average annual return. The package removes the top 3 annual net years for each system and averages only the remaining years. Full annual tables remain visible below so the good, weak, and partial years are all represented.

Nasdaq Intraday Mini Annual Table

Year	System Return	Net	QQQ Return	QQQ Regime
2021	53.1%	\$26,560	31.5%	QQQ up
2022	1.7%	\$874	-33.2%	QQQ down
2023	32.6%	\$16,291	55.9%	QQQ up
2024	37.5%	\$18,747	27.7%	QQQ up
2025	76.2%	\$38,097	21.0%	QQQ up
2026	26.0%	\$12,978	-2.2%	QQQ down

Nasdaq Intraday Annual Table

Year	System Return	Net	QQQ Return	QQQ Regime
2011	2.8%	\$7,110	1.9%	QQQ up
2012	4.3%	\$10,832	15.9%	QQQ up
2013	1.3%	\$3,195	32.4%	QQQ up
2014	8.8%	\$21,965	20.1%	QQQ up
2015	17.2%	\$43,110	9.8%	QQQ up
2016	14.6%	\$36,418	9.4%	QQQ up
2017	3.5%	\$8,755	31.5%	QQQ up
2018	27.4%	\$68,495	-1.8%	QQQ down
2019	26.5%	\$66,325	38.4%	QQQ up
2020	69.9%	\$174,742	46.0%	QQQ up
2021	144.4%	\$360,888	29.2%	QQQ up
2022	5.4%	\$13,425	-33.2%	QQQ down
2023	67.3%	\$168,292	55.9%	QQQ up

2024	79.8%	\$199,522	27.7%	QQQ up
2025	159.6%	\$399,000	21.0%	QQQ up
2026	52.5%	\$131,202	-2.2%	QQQ down

What The 12 Months Must Prove

- The platform can ingest live data, form bars, and reproduce replay signals after market close.
- Broker-paper orders match local order intent, fills, and positions.
- Daily flattening, stale-feed blocks, and kill-switch behavior work under real operating conditions.
- Monthly reports can show equity, drawdown, exposure, fills, costs, incidents, and reconciliation status.
- The strategy still makes operational sense after live shadow/paper evidence, not only historical replay.

What Is Out Of Scope For The First Ask

- No promise of a live CTA track record.
- No public solicitation.
- No compensated CTA advice, client account direction, or managed futures trading until counsel confirms registration/exemption and disclosure requirements are satisfied.
- No NQ live trading before MNQ execution is validated.
- No guarantee that historical returns will persist.

Diligence Notes

The strategy mechanics are intentionally summarized at a high level. Exact formulas, state gates, and sizing maps should stay internal or be disclosed only under a separate diligence process. Any investor-facing version needs counsel review before distribution.
